Cost ratios (annual) including VAT as at 31 March 2024

	Class B	Class C
Based on period from:	01/04/2021	01/04/2021
Total Expense	1.73%	1.03%
Transaction Costs	0.00%	0.00%
Total Investment Charge	1.73%	1.03%
1 Year Total Expense	1.73%	1.03%

Total Expense (TER): This ratio shows the charges, levies and fees relating to the management of the portfolio and is expressed as a percentage of the average net asset value of the portfolio, calculated over the period shown and annualised to the most recently completed quarter. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER should not be regarded as an indication of future TERs.

Transaction Costs (TC): This ratio shows the percentage of the value of the fund incurred as costs relating to the buying and selling of the fund's underlying assets. TC are a necessary cost in administering the fund and impacts fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of fund, investment decisions of the investment manager and the TER.

Total Investment Charges (TIC): This ratio is simply the sum of the TER and TC, showing the percentage of the value of the fund incurred as costs relating to the investment of the fund. It should be noted that performance figures account for all costs included in the TIC ratio, so you should not deduct the TIC from performance figures, the performance is already net of the TIC.

Fund review

Over the quarter, the fund returned a positive return, though slightly behind benchmark. The underperformance was the result of the fund's defensive positioning at the beginning of the year coupled with a marginal underperformance from the global equity component in the fund. The fixed income component performed in line with benchmark.

Within equity, our overweight to communication services and underweight to real estate, utilities and consumer staples were the key contributors to our positive allocation over the quarter. Stock selection was broadly in line with the MSCI ACWI.

We expected bond yields to retrace some of the late-2023 rally and have added value by maintaining an underweight duration strategy relative to benchmark in the quarter. The ongoing overweight exposure to the US Dollar added significant value in the quarter with the DXY Index gaining over 3% predominantly due to persistent weakness in the Yen.

Market overview

Global equity markets reached new highs as the world's economic expansion and corporate earnings cycle have proven to be more resilient than was predicted only a few months ago. Investors have also been front-running expectations of lower interest rates to be sanctioned in the second half of the year as inflation continues to trend lower. In US dollar terms global equities are up 8% year-to-date, 23% over the past 12 months and an eye-watering 44% since the October 2022 bear market low point. Sovereign bond yields have adjusted modestly higher to reflect the reality that the path for core inflation, albeit lower, looks set to be both bumpy and sticky as the global economy recovers and favourable base effects begin to fade.

Looking ahead

With the headwind from rising interest rates looking set to ease further in the second half of the year coupled with better-than-expected private sector financial health, a tight labour market and easier financial conditions the global economy has proven to be much more resilient than most predicted and the economic expansion now looks set to modestly gather pace as the year progresses. While interest rates almost certainly have peaked, Central Banks can afford to be patient and wait for "more certainty" that inflation is indeed still declining and on a sustainable path to target levels before sanctioning interest rate cuts.

While we acknowledge that a combination of positive earnings momentum, lower interest rates and falling inflation bode well for equity returns, we believe that a lot of the good news is already reflected in many share prices, with little margin of safety for investors in the event of disappointment. As a result, we have positioned the fund with a neutral allocation to global equity, and a focus on quality global businesses with proven pricing power and healthy balance sheets. Bonds are fairly priced and together with cash currently provide investors with favourable income yields and diversification while equity markets are trading at elevated levels.
