## Enhanced Income (USD) Class

### Fund information update at 29 February 2024

#### What is the fund's objective?

The objective of the Class Fund is to provide a return in excess of Barclays Benchmark Overnight USD Cash Index, whilst maintaining a high degree of capital preservation.

#### What does the fund invest in?

The Class invests primarily in quality short-dated fixed, floating and inflation linked interest bearing securities, and, where in the opinion of the Investment Manager, direct investment in direct securities will not achieve sufficient diversification to achieve the Class Fund's objective, the Class Fund may also invest in other collective investment schemes.

#### What possible risks are associated with this fund?

The risk rating seen below is designed to give an indication of the level of risk, measured by volatility, associated with this specific portfolio. In order to arrive at the specific risk rating of the portfolio in question, Melville Douglas measures the volatility of the fund, in the form of standard deviation, over a three year rolling period, and compares the result to internal risk parameters. Please note that these risk ratings are designed as a guide only.

<b>1 Year Total Expense</b>	1.03%	0.83%

**Total Expense (TER):** This ratio shows the charges, levies and fees relating to the management of the portfolio and is expressed as a percentage of the average net asset value of the portfolio, calculated over the period shown and annualised to the most recently completed quarter. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER should not be regarded as an indication of future TERs.

**Transaction Costs (TC):** This ratio shows the percentage of the value of the fund incurred as costs relating to the buying and selling of the fund's underlying assets. TC are a necessary cost in administering the fund and impacts fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of fund, investment decisions of the investment manager and the TER.

**Total Investment Charges (TIC):** This ratio is simply the sum of the TER and TC, showing the percentage of the value of the fund incurred as costs relating to the investment of the fund. It should be noted that performance figures account for all costs included in the TIC ratio, so you should not deduct the TIC from performance figures, the performance is already net of the TIC.

The TER, TC & TIC cannot be determined accurately for portfolios/portfolio classes that are not yet 1 year old because of the short life span of the portfolio/portfolio class. Calculations in this instance are based on actual data where possible and best estimates where actual data is not available.

### Quarterly update at 31 December 2023

#### Fund review

The objective of the Class Fund is to provide a return in excess of the Barclays Benchmark Overnight USD Cash Index, whilst seeking to maintain a high degree of capital preservation. Investment will primarily be in quality fixed, floating and inflation linked interest bearing securities, and, where in the opinion of the Investment Manager, direct investment in direct securities will not achieve sufficient diversification to achieve the Class Fund's objective, the fund may also invest in other collective investment schemes.

The Fund's performance for the period was 1.88% versus the Fund's benchmark return of 1.36%.

#### Market overview

Global bond markets staged an impressive rally in the final quarter of 2023 driven by optimism that the US Federal Reserve (Fed), along with other major central banks, have not only reached the end of their respective tightening cycles but will begin cutting rates in 2024. This performance marks a welcome reprieve from the violent sell-off in world bond markets which began in mid-2020, triggered by a sharp rise in global inflation and the subsequent realisation that it would only be brought under control by an equally sharp rise in interest rates. Inflation rates are still above central bank target levels, but markets appear optimistic that price pressures will continue to trend lower in the coming quarters, predominantly due to the lagged effects of rate hikes bearing down on growth conditions, which in the US have proved to be much more resilient than forecast.

#### Looking ahead

The Fed affirmed speculation of a 'pivot' towards reversing a 22-year high in interest rates at its meeting in December. Whilst the caveat remains that rates would rise further should price pressures reignite, the latest forecasts (dot plot) now assume an increased 75 basis points of cuts in 2024 and no further hikes. It may still be early to declare final victory on inflation, but there is no doubt that the Fed have exceeded expectations by raising interest rates significantly without triggering a recession or meaningful impact on employment. Markets tend to exaggerate monetary policy expectations when it turns course, and this time has been no different with a significant rally in government bonds and futures pricing in roughly six cuts this year, commencing in March. In the absence of a recession (our base case), we view the recent sharp drop in yields as excessive, driven by over exuberance on the Fed's much anticipated pivot. Inflation is not yet at target levels and the last leg of the battle may prove difficult, particularly with economic growth conditions remaining much more resilient than widely expected, notably within the employment market. We are cognisant that excess savings and the benefits of the mass refinancing in the aftermath of the pandemic are, to some degree, living on borrowed time and we do expect much more subdued growth in the year ahead. However, the wealth effect from key drivers such as higher property/equity prices and a solid employment market provide a decent cushion against a material slowdown. This is in addition to a central bank which has now amassed an anti-recession armoury of over 500 basis points, ready for deployment if necessary – that is, if inflation continues to trend towards target levels.

The Fund performed strongly in December and indeed over the fourth quarter to end the year broadly in line with the cash benchmark. The fall in one and two-year US Treasury yields in recent weeks has widened the negative spread over one-month Treasuries (Cash), and while offering long-term value, in the short-term we would prefer to wait for a better entry point to extend the Fund's duration further.
