## Global Equity Class

Fund information update at 31 January 2023

### What is the fund's objective?

The objective of the Class Fund is to provide long-term capital growth.

### What does the fund invest in?

The Class Fund invests primarily in quoted global equities, which will maximise investment returns in USD.

### What possible risks are associated with this fund?

The risk rating seen below is designed to give an indication of the level of risk, measured by volatility, associated with this specific portfolio. In order to arrive at the specific risk rating of the portfolio in question, Melville Douglas measures the volatility of the fund, in the form of standard deviation, over a three year rolling period, and compares the result to internal risk parameters. Please note that these risk ratings are designed as a guide only.

#### Risk rating

Conservative	Moderately conservative	Moderate	Moderately aggressive	Aggressive
--------------	-------------------------	----------	-----------------------	------------

### What is the suggested investment period for this fund?

#### Minimum period

1 Month	6 Months	1 Year	3 Years	5 Years	7 Years
---------	----------	--------	---------	---------	---------

### Who should consider investing in this fund?

Due to the higher risk profile of equities relative to bonds and cash, the fund is only suitable for persons prepared to bear substantial losses and volatility on their invested capital. Investors should be prepared to hold the fund for a period in excess of five years. Typically, the fund would form part of a wider wealth management strategy.

### Income

**Distribution** Income available for distribution attributable to the Class Fund shall be accumulated and not distributed to Shareholders.

### General fund information

**Annual fee (manager)** - this is a service charge (% based) applicable to each class of a fund, that is levied on the value of your portfolio and includes the **Annual fee (adviser)** fee (where applicable). Annual fees are calculated and accrued daily and recovered monthly from the income awaiting distribution in the fund.

#### Cost ratios (annual) including VAT as at 31 December 2022

	Class B	Class C
<b>Based on period from:</b>	01/01/2020	01/01/2020
<b>Total Expense</b>	1.74%	1.03%
<b>Transaction Costs</b>	0.00%	0.00%
<b>Total Investment Charge</b>	1.74%	1.03%
<b>1 Year Total Expense</b>	1.73%	1.03%

**Total Expense (TER):** This ratio shows the charges, levies and fees relating to the management of the portfolio and is expressed as a percentage of the average net asset value of the portfolio, calculated over the period shown and annualised to the most recently completed quarter. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER should not be regarded as an indication of future TERs.

**Transaction Costs (TC):** This ratio shows the percentage of the value of the fund incurred as costs relating to the buying and selling of the fund's underlying assets. TC are a necessary cost in administering the fund and impacts fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of fund, investment decisions of the investment manager and the TER.

**Total Investment Charges (TIC):** This ratio is simply the sum of the TER and TC, showing the percentage of the value of the fund incurred as costs relating to the investment of the fund. It should be noted that performance figures account for all costs included in the TIC ratio, so you should not deduct the TIC from performance figures, the performance is already net of the TIC.

Fund Manager

Justin joined Melville Douglas in 2014 and has over 26 years' experience of managing global equity funds. He co-manages the Melville Douglas Select Global Equity Fund and covers a range of sub-sectors for the team. Prior to joining the company, he was a global equity fund manager in London for Sanlam and F&C Asset Management. He holds a BSc (Hons) degree in Business from Cass Business School, University of London. He is also a CFA® Charterholder and a Chartered Wealth Manager. Justin is based in Jersey.

**Derinia Mathura**  
BBusSci (Hons) Finance, CFA®  
Fund Manager

Derinia joined Melville Douglas in 2013 as the lead analyst for a range of global equity holdings within the consumer discretionary sector. She is the co-manager of the Melville Douglas Select Global Equity Fund. Prior to joining, she worked for RMB Morgan Stanley as a sell-side equity research analyst covering financials. Derinia has a BBusSci (Hons) degree in Finance and is also a CFA® Charterholder.

Melville Douglas Investment Management (Pty) Ltd, FSP 595, an authorised Financial Services Provider under the Financial Advisory and Intermediary Services Act 2002, manage the investments of the fund. Since 1983 Melville Douglas has been delivering superior investment returns across a number of asset classes. As a global boutique investment management company within the Standard Bank Group, we are uniquely positioned to offer domestic and offshore investment solutions. What truly sets Melville Douglas apart is our experienced investment team and our approach to investing – driven by balance, a long-term view and a commitment to fundamental research – which informs our investment decisions across the board.

### Fund review

The fund's net asset value rebounded, driven by a relief rally that followed heavy market selloffs in prior quarters. Stock selection enabled the fund to outperform the MSCI All Country World benchmark index. Notable contributors included Nike (better than expected sales amidst an inventory glut), JPMorgan (strong net interest income) and Tencent (easing Covid-related restrictions and regulatory backdrop).

The large holding in US health insurance company Elevance was reduced. The sector tends to underperform in the two-year lead-up to US presidential elections (next election in November 2024) as uncertainty over healthcare policy is stoked by campaign pledges. Beyond election cyclical we remain positive about the prospects for Elevance and its rival UnitedHealth because they continue to garner a larger slice of the Medicare/Medicaid pie and they profit from the ongoing growth in health spending as populations age and more treatments become available. The proceeds from reducing Elevance were used to buy an initial stake in Thermo Fisher. This "one-stop shop" life science tools and services business also benefits from rising healthcare spending but has less political risk.

### Market overview

Global stock markets were boosted by hopes the Federal Reserve would temper its hawkishness. This expectation was fueled by the release of lower than anticipated US inflation data. In addition, corporate earnings reports were mixed but not as bad as feared. Some companies successfully leapt over a low-set bar. For example, US banks reported solid profits that were supported by strong net interest income amidst a higher rate environment. Others tripped over. Notable amongst these were Big Tech names such as Microsoft, Alphabet, Amazon and Meta Platforms. Demand for their services proved to be less resilient than investors had hoped as customers tightened their belts. Chinese stocks exhibited a powerful rebound in anticipation of easier Covid restrictions leading to a substantial pick-up in economic activity.

The waxing and waning of industry-sector and regional performance is why it pays to be diversified. In doing so the portfolio limits the need to flip-flop between short-term performance trends. This enables compound returns to be generated by holding quality investments through the ups and downs rather than cutting-and-running (often at the wrong time in hindsight) when they are temporarily out of favour.

### Looking ahead

2023 beckons for quality-growth stocks (to which the portfolio has a bias). The tighter monetary policy backdrop is starting to bite into demand, albeit mitigated by healthy consumer savings and solid corporate balance sheets. As a result, there will be far fewer companies compared to recent years that can grow revenue and cash flows at a robust clip. It makes sense to pay a premium for growth when it is scarce. It doubly makes sense when the same stocks have devalued over the past year.

More importantly, beyond the business cycle perspective, there is empirical evidence to show quality strategies provide better risk-adjusted returns than more speculative investments. This anomaly is due to persistent demand for high-risk stocks that offer embedded leverage (i.e., similar returns to buying on margin) and lottery characteristics. Retail investors are drawn to moon-shots that will be the next Apple or Tesla. This persistent over-bidding of high-risk investments is well underpinned by human nature (i.e., greed) and by investors seeking to gamble insufficient savings to meet future retirement needs amidst a low return world. The meme stock boom-and-bust is the most recent example. The upshot is that the fund's "boring" quality-growth shares can continue to deliver better outcomes for patient investors.
