

Melville Douglas Income Fund Limited

Enhanced Income (USD) Class

Fund information update at 30 November 2022

What is the fund's objective?

The objective of the Class Fund is to provide a return in excess of Barclays Benchmark Overnight USD Cash Index, whilst maintaining a high degree of capital preservation.

What does the fund invest in?

The Class invests primarily in quality short-dated fixed, floating and inflation linked interest bearing securities, and, where in the opinion of the Investment Manager, direct investment in direct securities will not achieve sufficient diversification to achieve the Class Fund's objective, the Class Fund may also invest in other collective investment schemes.

What possible risks are associated with this fund?

The risk rating seen below is designed to give an indication of the level of risk, measured by volatility, associated with this specific portfolio. In order to arrive at the specific risk rating of the portfolio in question, Melville Douglas measures the volatility of the fund, in the form of standard deviation, over a three year rolling period, and compares the result to internal risk parameters. Please note that these risk ratings are designed as a guide only.

Based on period from:	01/10/2019
Total Expense	0.25%
Transaction Costs	0.01%
Total Investment Charge	0.25%
1 Year Total Expense	0.25%

Total Expense (TER): This ratio shows the charges, levies and fees relating to the management of the portfolio and is expressed as a percentage of the average net asset value of the portfolio, calculated over the period shown and annualised to the most recently completed quarter. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER should not be regarded as an indication of future TERs.

Transaction Costs (TC): This ratio shows the percentage of the value of the fund incurred as costs relating to the buying and selling of the fund's underlying assets. TC are a necessary cost in administering the fund and impacts fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of fund, investment decisions of the investment manager and the TER.

Total Investment Charges (TIC): This ratio is simply the sum of the TER and TC, showing the percentage of the value of the fund incurred as costs relating to the investment of the fund. It should be noted that performance figures account for all costs included in the TIC ratio, so you should not deduct the TIC from performance figures, the performance is already net of the TIC.

Investment will primarily be in quality fixed, floating and inflation linked interest bearing securities, and, where in the opinion of the Investment Manager, direct investment in direct securities will not achieve sufficient diversification to achieve the Class Fund's objective, the fund may also invest in other collective investment schemes.

The Fund's performance for the period was – 0.29% versus the Fund's benchmark return of + 0.55%.

Market overview

The rout in global government bond markets continued unabated in the third quarter with yields rising sharply in reaction to ongoing extreme inflationary pressures and therefore, increasingly 'hawkish' central banks. Earlier hopes that weakening economic data would convince central banks to adopt less aggressive tightening cycles had cold water thrown on it in July when the US Federal Reserve committed to 'do whatever it takes' to bring inflation back in line. This monetary policy mantra has been quickly adopted on a global scale and interest rate expectations continue to climb despite the clear negative ramifications for future economic growth conditions as lowering inflation has become overwhelmingly more important than achieving a 'soft landing'. Having become accustomed to the luxury of predictable central bank 'forward guidance' and absence of inflationary pressures for many years, global bond markets are now contending with heightened uncertainty on both fronts and their reaction has been distinctly negative.

Looking ahead

US government bonds suffered further losses in the quarter with short yields coming under particular pressure. Two-year Treasury yields rose approximately 120 basis points, but it was the three-month yield which suffered the largest increase of over 160 basis points. The US Federal Reserve (Fed) is battling the highest inflation in nearly forty years and has acknowledged that a slowdown in economic growth conditions and a rise in unemployment are prices worth paying to ease rampant price pressures. Five interest rate hikes have now been sanctioned this year with the last three being 75bps moves and the tightening phase is not over yet. At the last Fed meeting, interest rate projections were raised even further and now imply rates reaching 4.4% this year and 4.6% in 2023 before moderating to 3.9% in 2024. This ongoing and rapid withdrawal of liquidity will undoubtedly weigh on the growth outlook in the coming quarters, but the Fed has made it clear that the priority must be to lower inflation before it becomes entrenched which would impact more longer-term economic damage than an economic slowdown or recession. Ultimately, whilst economic conditions remain broadly resilient currently, predominantly the employment market, tightening policy aggressively now should dampen demand and weigh on inflation whilst at the same time building in interest rate armoury for the impending slowdown in growth. It remains a fine balancing act for the Fed who still consider that a 'hard landing' can be avoided – the jury remains divided.

The marked rise in short-dated (money market) yields has provided an opportunity to re-invest maturing bond proceeds into higher yields over the quarter, whilst continuing with a short duration (interest rate risk) of below one year. The credit exposure has been reduced as corporate bonds matured thereby increasing the credit quality of the Fund as the additional yield pick-up on offer in short-dated credit has not been sufficient to compensate for the additional credit risk. Whilst the rise in yields has been pretty extreme as the Fed aggressively tightens monetary policy, our conservative positioning has limited drawdown in the quarter, however with higher yields currently offering better value we will be utilising the cash flow from upcoming maturing bonds to selectively increase the duration in the months ahead.
