## Enhanced Income (USD) Class

Fund information update at 31 July 2022

### What is the fund's objective?

The objective of the Class Fund is to provide a return in excess of Barclays Benchmark Overnight USD Cash Index, whilst maintaining a high degree of capital preservation.

### What does the fund invest in?

The Class invests primarily in quality short-dated fixed, floating and inflation linked interest bearing securities, and, where in the opinion of the Investment Manager, direct investment in direct securities will not achieve sufficient diversification to achieve the Class Fund's objective, the Class Fund may also invest in other collective investment schemes.

### What possible risks are associated with this fund?

The risk rating seen below is designed to give an indication of the level of risk, measured by volatility, associated with this specific portfolio. In order to arrive at the specific risk rating of the portfolio in question, Melville Douglas measures the volatility of the fund, in the form of standard deviation, over a three year rolling period, and compares the result to internal risk parameters. Please note that these risk ratings are designed as a guide only.

<b>Based on period from:</b>	01/07/2019
<b>Total Expense</b>	0.25%
<b>Transaction Costs</b>	0.01%
<b>Total Investment Charge</b>	0.26%
<b>1 Year Total Expense</b>	0.25%

**Total Expense (TER):** This ratio shows the charges, levies and fees relating to the management of the portfolio and is expressed as a percentage of the average net asset value of the portfolio, calculated over the period shown and annualised to the most recently completed quarter. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER should not be regarded as an indication of future TERs.

**Transaction Costs (TC):** This ratio shows the percentage of the value of the fund incurred as costs relating to the buying and selling of the fund's underlying assets. TC are a necessary cost in administering the fund and impacts fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of fund, investment decisions of the investment manager and the TER.

**Total Investment Charges (TIC):** This ratio is simply the sum of the TER and TC, showing the percentage of the value of the fund incurred as costs relating to the investment of the fund. It should be noted that performance figures account for all costs included in the TIC ratio, so you should not deduct the TIC from performance figures, the performance is already net of the TIC.

### Fund review

The objective of the Class Fund is to provide a return in excess of the Barclays Benchmark Overnight USD Cash Index, whilst seeking to maintain a high degree of capital preservation. Investment will primarily be in quality fixed, floating and inflation linked interest bearing securities, and, where in the opinion of the Investment Manager, direct investment in direct securities will not achieve sufficient diversification to achieve the Class Fund's objective, the fund may also invest in other collective investment schemes.

The Fund's performance for the period was – 0.29% versus the Fund's benchmark return of + 0.19%.

### Market overview

The global economy has rapidly entered a period of payback from the extraordinary and often unconventional stimulus measures sanctioned throughout the pandemic, unaided by the stark reality that central banks consistently underestimated inflation. Liquidity now needs to be drained from the system and interest rates can only go one way until such time as inflation eases materially or tighter monetary conditions eventually choke growth to the point of recession. The prospect for a 'soft landing' is understandably heavily in debate and consensus is rapidly shifting towards a recession unfolding sometime next year.

Government bond markets have posted deeply negative returns this year, aggressively re-pricing for the new 'inflationary and tighter policy norm'. Many factors will dictate the direction from here but generally, yields spike most in the early phase of a tightening cycle and that currently seems to be the playbook. However, we still expect yields to climb higher, albeit at a more modest pace, whilst central banks remain firmly in hawkish mode.

### Looking ahead

US bonds continued to sell-off aggressively in the second quarter as the Federal Reserve's (Fed) hawkishness intensified. Interest rates have now risen three times with each individual move getting bigger and earlier expectations of rates ending the year around 2.5% have been quickly extinguished by the most recent strong inflation report which prompted the Fed to quickly unveil a revised 'dot plot' with an average year-end target for interest rates now at 3.4%. What is very clear now is that persistent price pressures are forcing the Fed to shift its focus from supporting economic growth to getting inflation back towards the 2% target. It is worth noting that the Fed have acknowledged the risk of recession 'as a possibility' although the goal remains that of a 'soft landing' despite the headwinds. We have our doubts that inflation can fall anywhere close to 2% target levels without imparting considerable damage to economic growth – time will tell.

Ultra-short-dated yields (sub 2 years) have risen significantly over the second quarter of 2022. Naturally, this is to be expected given the Fed's aggressive monetary tightening policy as the market discounts further interest rate hikes, with one-year US Treasury yields rising approximately 110 basis points in the quarter. The Fund has maintained a defensive duration strategy (interest rate risk), with a focus on cash flow from maturing bonds which has been reinvested, locking into substantially higher yields than were available in 2021. The credit quality of the Fund has increased, currently AA (S&P) following a higher allocation to US Treasuries and 'AAA' rated Supranational issuers.
